

Introduction to the CIAS Quick Exit feature

The new Quick Exit feature in CIAS allows participants to quickly exit an intervention in case of an emergency or situation where privacy is compromised.

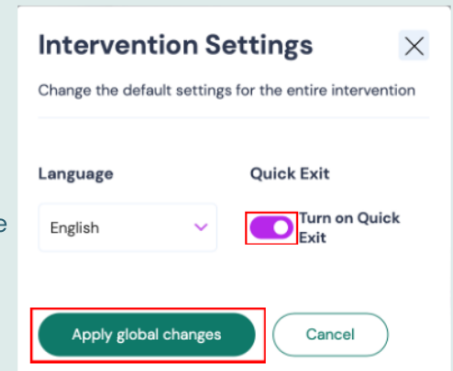

Step 1

To use the Quick Exit feature in your CIAS Intervention, navigate to the session page and click "Intervention Settings."

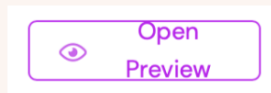

Step 2

The following pop-up will appear. Click the "Quick Exit" toggle, so that it changes from gray to purple. Click the "Apply global changes" button.

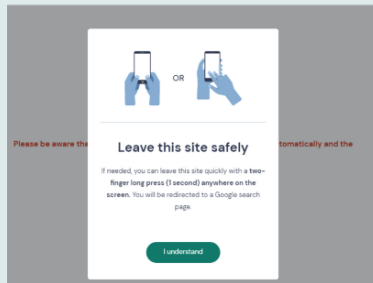

Preview

Note: You can preview your intervention to see how the Quick Exit option will appear to users on different devices.

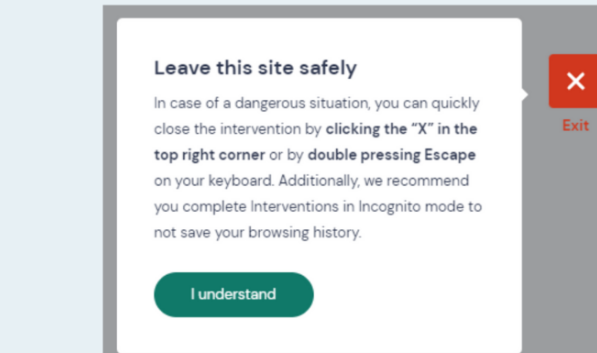

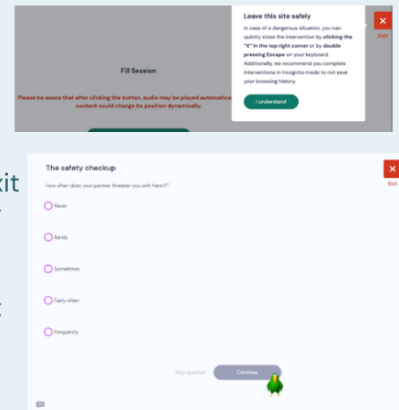

PC Users (with touch screen)

Participants using a touch screen PC will receive both Quick Exit messages. First they will receive instructions to exit via touch screen, followed by the escape/exit buttons.

PC Users (no touch screen)

PC users (without a touchscreen feature) can exit the intervention by pressing their computer's escape button twice, or by clicking the orange box with the X at any time throughout the intervention.

Mobile Users

Mobile users can exit the intervention with a two-finger long press anywhere on the screen for 1 second at any point during the intervention.
